### Hakime Erciyas. Born ind 1956.

I studied machine construction. I started my business life in 1975 at Lassa tyre factory, however the main business that led my life for better was a company established in 1981 that started with steel pipe isolation and grew into this International Holding called Erciyas Steel Pipe Co. Just like the main compound of our business, Steel, I see myself powerful, strong and resistant. Throughout my business life, I had to work in standard measures, but I discovered that, I

wanted to work outside these limits and standards. I always dreamed of expressing my emotions through tangible ways. Until I met art. It was Powerful beyond standards. It was Free beyond standards. It was more than standards. Once more, I was relying on another powerful material, bronze. Bronze was different than steel, bronze was a helper, bronze helped me to achieve my dreams and goals of expressing my self in tangible ways, and most important of all, bronze was outside of the standards. With the perspective of an artist, A Sculpture is a three dimensional form, but for me, It was more than that, It was a door witch opened my outer doors and let my feelings and my emotions loose. And every Sculpture that I make is a door witch makes me even more free everyday. With Love From the fragmentation of the atom, to recreation and reincarnation.....we can if we want.....PEAK
